

B-TECH180 ECO BREEZE-TEX TRS4 HCT MAN

category	HI - PERFORMANCE
usage	ROAD - MTB
distance	LONG DISTANCE
riding time	over 8 hours
density	180 kg./m ³
thickness	14 mm
layers	4
size	L36.0 cm x W21.5 cm

ECO RECYCLED BREEZE-TEX

Composition: 85% recycled PA - 15% EL

Eco Breeze-TEX with a soft peach touch is a certified system of recycled polyamide yarns, coming 100% from pre-consumer first working refuse (industrial wastes of polyamide and polymer chips processed into a new production session).

The revolutionary NILIT® Breeze yarn grants an ultra-soft hand and a cooling effect maintaining a comfortable body temperature during and after physical performance even with rising temperature conditions.

The active cooling technology becomes effective as soon as you start physical effort.

The skin temperature is lowered of 1°C through a combination of factors:

- Flat cross section structure: the wide surface area of the yarns become small air channels for the transfer of body heat away from the skin ensuring the cooling effect.
- Special texture: the low bulk yarn, at the base of this soft and smooth lightweight material, grants maximum breathability and ventilation.

TRS4 FOAM

Innovative perforated (1mm holes) hi-density open cell foam. It has been developed to ensure an excellent ventilation and moisture management.

The features of a TRS-foam pad are lightness, transpirability, elasticity and comfort.

HCT - HI CUSHIONING TECHNOLOGY

La Fonte Hi Cushioning Technology is a further step forward in innovation and technical researches.

HCT, with its 180kg/m³ density, provides maximum protection and shock absorption neutralizing any negative vibration developed during the impact with the ground.

The highly elastic feature of the material grants an excellent dumping action generating a rebound thrust which compensates the compression generated in the ischiatic areas.

The distribution of the pressures on the material surface is synonymous of increased comfort.

B-ELASTIC JERSEY

A 4-way stretch base layer providing maximum breathability, increased quick-drying and excellent elasticity.

COLOUR AVAILABILITY

	INTERNATIONAL ORANGE
	GRAPHITE GREY

ECO COLLECTION

The ECO collection by La Fonte is a reaction to the market expectations for a deeper social responsibility with use of recycled raw materials matched to a reduction at source of wastes.

The careful reduction of waste and pollution emission is strategic for La Fonte eco-sustainable philosophy. The product, endorsed by high certification standards, guarantees the consumer's safety and the environmental respect granting a future for the coming generations without jeopardizing the excellent quality of the cycling pads.
